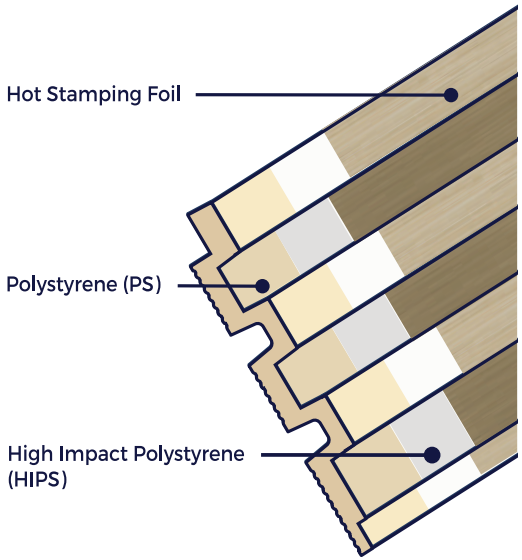
FEATURE

OUR PRODUCT



Polystyrene (PS) is the main material for our products. The features of PS make our products waterproof,termite-free, and lightweight.

We use an extrusion process to ensure consistent shape and size of our products. High Impact Polystyrene (HIPS) is used as a cover for our products. It smoothens the product surface and enables the user to work with ease. The final process is Hot Stamping-Foil. The heat makes the foil fully attach to the surface, making it durable
